

Considerations on EANET 4th Mid-term Plan

Rep. of Korea

July 2020

Ministry of Environment

◆ Support the proposed necessity of expansion of EANET objective

- The recent international changes in societies and economies, there has been a moving tendency in the field of addressing air pollution as well. Accordingly, marking the 20-year anniversary, EANET also needs to pursue one step forward.
- However, the suggested 4th MTP seems too extensive.
 - The project fund activities need to be listed up by priority, in consideration of both participating countries' needs and the current status and pattern of air pollution in the Northeast Asia.
 - We propose to have meeting(s) among our scientists (ex. SAC, STM or other meetings dedicated for the purpose) first to screen out important activities and come up with the priority list based on which the policy makers have further discussion in another WG meeting during Sep this year.
- For the Objective 3 (Promotion of Capacity Building), all the sub-activities are those grouped in project fund. Some of them would change to core activities depending on particular conditions and needs.
